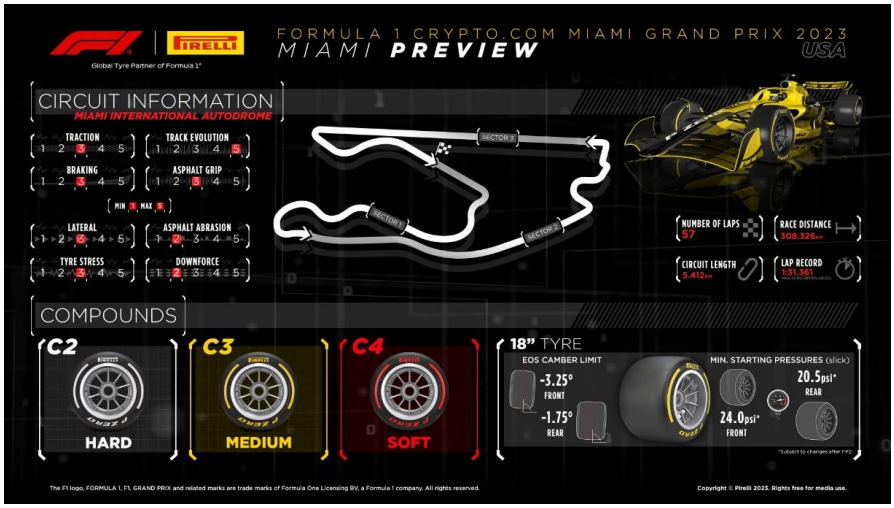
FORMULA 1 CRYPTO.COM MIAMI GRAND PRIX 2023

OFFICIALS NEWSLETTER

PIRELLI ON TIRES



"This weekend, Formula 1 will race in Miami for the first of three rounds in the United States on this year's calendar, along with the now-traditional event in Austin and the much-awaited race in Las Vegas. It is not the first time that the championship has had three grand prix take place in the US in the same year, but never before have we seen our sport make such an impact with the American public, and this is largely thanks to the commitment made by Liberty Media. In the first race held on the track around the Hard Rock Stadium last year, the tires behaved as expected on asphalt which had rather particular characteristics, above all due to a very high "micro-roughness". We know that the track has now been completely resurfaced and we will have to check during the usual inspection that precedes the start of the weekend if there will be any significant changes in its characteristics. The Miami track requires average downforce levels, as it features a wide variety of corners but also a very long straight. We have brought the middle tires in the range (C2, C3, and C4), also due to the fact that we can expect very high temperatures: last year the asphalt reached almost 60°C." *Mario Isola - Motorsport Director*

The most used compounds in the 2022 race were medium and hard. Most of the drivers competed the grand prix with just one pit stop. The race was neutralized twice by a safety car and a virtual safety car, which allowed some teams to make a second pit stop.

The weather on the coast of Miami is very changeable. In 2022 the race was spared by rain, which fell only when the starting grid was being assembled with the high temperatures meaning that the track dried out before the race started. The possibility of downpours has to be taken into serious consideration.
