## Introduction:

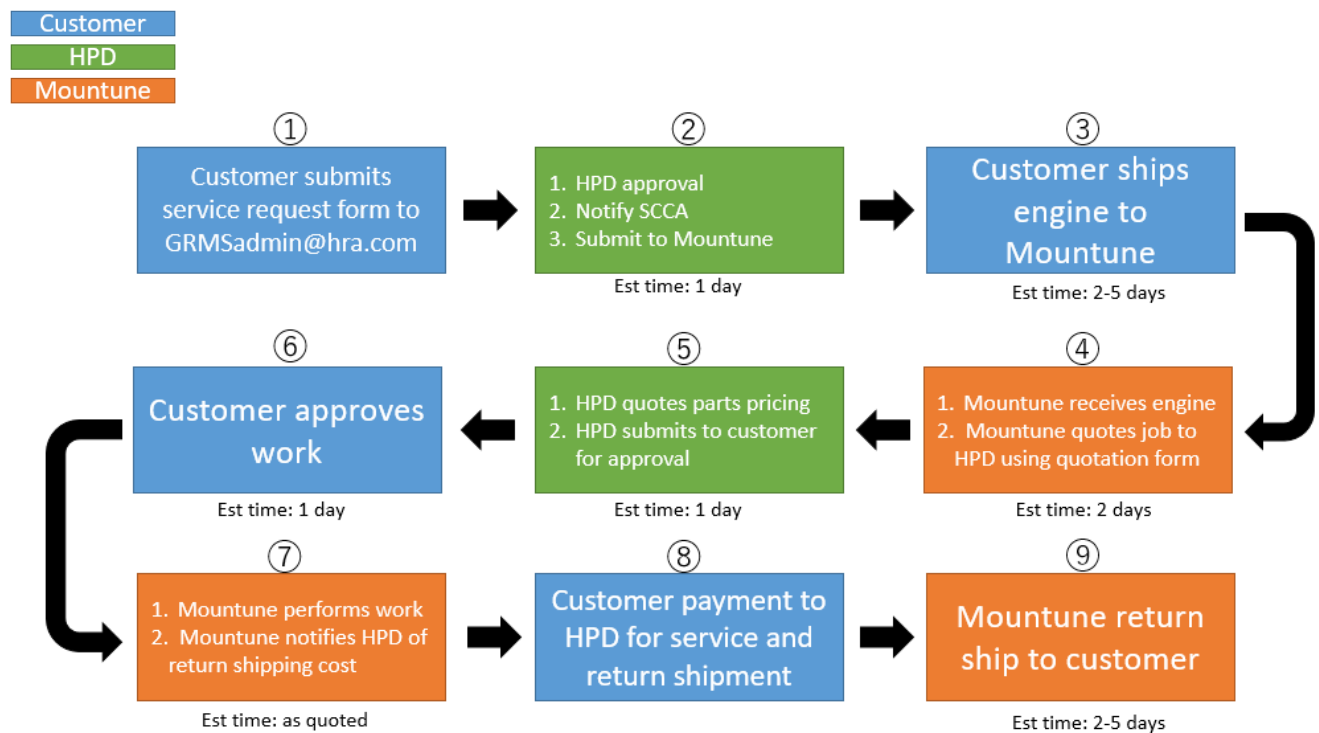

HPD has established a standard workflow and documentation process for the servicing of K20C1 engines used in the F4 US Championship and F3 Americas Championship. Below, the workflow is defined for customers to provide transparency on the process and to establish expectations for engine service. Expedited service can be arranged and may be subject to additional fees. Services provided under this procedure include dyno checks, rebuild/refresh, repairs, etc. It is recommended to submit the form to HPD ahead of time in the case of planned service so that requested return dates can be met as closely as possible.

## Documentation:

HPD Engine Service Request and Quote Form.pdf (fillable form)

## Procedure:

Responsibilities for each step in the procedure are color coded in the flow chart below. Processing time for each step is an estimation. Shipping of the engine to Mountune may coincide with submission of the service request form where necessary.
