#4 – 4.2020

RAIN LIGHT UPDATE 08-12-038

FIA Type 1 Mandatory Update

COST: \$219

Following safety reviews by sanctioning bodies and the FIA, a flash pattern will be initiated in the event of an engine stall on the starting grid in order to alert the drivers behind. A stall flash is a higher frequency than the standard rain flash. The rain light flash sequences will now be controlled by the ECU. The rain light must be replaced to achieve this.

For the JS F3, the rain light mounting is the same as original.

ECU's must be updated to the latest firmware for correct rain light functionality. Please coordinate ECU updates with HPD.

New rain lights are available from usparts@ligierautomotive.com
