REVERSE to 1ST SHIFT

TO BE IMPLEMENTED AT INDY F4 EVENT WITH ECU UPDATE

Due to the half-shift layout of the gearbox an additional shift strategy has been developed to assist drivers after spins and off track incidents where the car may seem stuck in reverse after backing up.

This strategy enables a full shift from reverse to 1st, skipping neutral. Please remember the clutch must still be utilized during the shift.

To complete a full shift to 1st from reverse, simply select the Upshift Paddle. A half shift to Neutral may still be selected by using the blue 'N' (Neutral) button as standard.

Strategy below, note qualifiers of throttle pedal position and wheelspeed:

IF current gear=REVERSE & Upshift Paddle selected, & Throttle Pedal less than 10%, & Wheelspeed less than 1mph, **THEN** complete full shift to 1ST GEAR
