COOLING SYSTEM MAINTAINENCE

1 Cleaning advisory

Water and Oil radiators

Following the recent race at New Jersey Motorsports Park, where track maintainance had left a lot of grass cuttings all round the circuit, we would strongly advise all teams to check the condition of the water and oil radiators. The small fin pitch of these coolers is susceptible to blockage from grass, so we advise teams to blow out the radiators to keep them at optimum operating conditions. This should be considered as essential maintainence evey time the car has had an off-track excursion
