**F4 Team Memo #0012**

TRBF4-2016-012

**Subject: Transponders**

The USF4 Crawford chassis is wired to accommodate MyLaps timing transponders. These transponders will come with the car and must be purchased by the teams. There are 2 types of transponders, the TranX 260 and the X2.

The X2 is a new product to replace the TranX 260 that has been in use for many years. Teams can use either transponder for the USF4 series. There are functional differences between the new and old transponders but the single difference that would most affect USF4 teams is the new X2 transponders are available only with a 1, 2 or 5 year lease.

Either model transponder can be used for the USF4 Championship Series.

New X2 transponders can be purchased directly from MyLaps @ <http://www.mylaps.com/en> or from many racing supply outlets.
