New Jersey Motorsports Park

Honda Performance Development

HPD has added a flag to the logging configurations to all the teams effective today. The flag will be visible under the channel name "**Limp**" and appear in the logged team data after the team installs "**GDI80-01H34 Team V011.gin**" file into GEMS GDA (drag and drop file into the GDA window).

This GIN file will be available to teams on the Onroak file-sharing server and will be accompanied by a calibration update from an HPD representative. HPD will apply the update before the first event practice session on Friday.

The "Limp" flag will change from 0 to 1 in the event that the oil pressure drops below the threshold oil pressure setting. At this point NO ACTION is taken by the limp flag for the purpose of de-rating the engine.

Please refer to the F4 Engine Operating Procedure v05 as a reminder of the recommended oil pressure setting. For reference, the "limp" flag will be triggered when the oil pressure setting falls below 4.5bar @ 5000 RPM. Also, please keep in mind some engines, as they come from QSRE, may trigger the "Limp" flag.

Thank you,

HPD
