

F4 Technical Advisory Memo

No: TAMF4-2020-013
Date: May 29, 2020
Subject: Rear number plate

Since the new rain light mounts to the rear face of the attenuator, it covers the space formerly used for the rear number.

Ligier has produced a new rear number plate to mount to the top of the attenuator, using the bracket formerly used to mount the original style rain light. The part number is CCF4-13-019, at a price of \$35. The plate is available for order or from the Ligier truck trackside.

SCCA will provide numbers as part of the packet of numbers and stickers.

This is a Type 1 part and a mandatory update. The new number plate and number must be in place to pass annual tech at the first event for a car.
