

[U1]

You love the way a tower sounds. You love the way a tower looks. You love every last thing about a tower, especially the slam factor. Unfortunately you've deployed every ounce of available grey matter to scour every square centimeter of available room space, and still have no friggen' place to plant them. Drag. But there is good news: our freestanding U1 subwoofer system. The U1 system gives you two, side-loaded 12 inch" aluminum beasts housed in a single, polite looking cabinet that can shake plaque from teeth, the A1 250 watt amp and the X1 electronic crossover. In other words, you'll be fine.

[SPECIFICATIONS]
