Member Advisory

DATE: December 20, 2019
NUMBER: MA 19-02

FROM: Club Racing Board

TO: All Participants

SUBJECT: Oil Additives in Gasoline engines

To all members racing a gasoline engine that requires adding oil to the fuel,

The Club Racing Board would like to remind all racers about the Dielectric Constant (D.C.) found in section 9.3.25 of the current GCR. The D.C max for gasoline engines with or without added oil is shown in the chart below. It has come to our attention that some oils added to gasoline rotary engines could increase the D.C. to exceed the maximum allowed. Please make sure the oil used as an additive does not exceed the maximum amount as stated in the current GCR.
