## Rules for Local Conditions being Displayed In-Car

The Flagtronics In-Car Devices are designed to give Drivers ample warning of changing local conditions. Using predefined GPS-based Corner Station Display Zones, the FT Devices will display the Local Condition of the next Corner Station as the Driver is within reasonable line-of-sight of said Corner Station. The change in conditions on the FT Device is a prompt for the Driver to look at the approaching Corner Station and its current condition.

In the example below, Turn 11 has issued a Standing Yellow. When a driver passes Turn 10 and reaches the Turn 11 Display Zone, the FT Device will change from "Green" to "Local Yellow". When the Driver reaches the Turn 12 Display Zone, the FT Device will change back to "Green". The local condition displayed on the FT Device **does NOT denote** when the Driver has entered or cleared a No Passing Zone. No Passing Zones are governed by the sanctioning body rule book and are independent of the FT Device Display Zones.

## Individual Flags:

| Condition                                                                                                                                                                                                                                                                                                                                                                                                   | FT200/FT-RD In-Car Display                                                                                                                                                               |
